

FY2017 New Bedford Harbor Major Targets

Elaine Stanley:

- Work with MassDEP towards approval of the Aerovox Phase III under 21E program that provides for selection of remedial alternatives that will adequately contain DNAPL and contaminated soil and groundwater from migration to the Acushnet River. (Assumption: MassDEP commits the resources to review and respond to Phase III deliverables and holds AVX to a tight schedule to revise the Phase III to address regulatory concerns.

Ex. 7(a)

Ex. 7(a)

- Work with Corps, Jacobs and Battelle to produce an update to the 2013 report on the 2012 Aerovox near-shore boring program to incorporate 2015 boring collection effort results and to update the excavation and off-site disposal cost estimates for the Aerovox near-shore sediments. In concert with oversight and input on selection of 21E Phase III remedial action alternatives, begin planning for EPA remedial efforts to address the Aerovox near-shore sediments under Superfund. (Same assumption for first bullet).
